NOTES:

1. For parallel operation of heaters, equipment should be designed that at normal supply voltage bogey tubes will operate at this value of heater voltage.
2. The bogey value of current is obtained when operating the heater at the specified 6.3 volts.
3. Heater voltage supply variations shall be restricted to maintain heater voltage within the specified tolerance.
4. Section No. 1 connects to Pins 6, 7, and 8.
Section No. 2 connects to Pins 1, 2 and 3.

SYLVANIA TYPE 6EV7 (Cont'd)

5. Plate dissipation can be as high as 2.5 watts when the "ON" time exceeds 30 seconds in any 2 minute interval.
6. Plate dissipation can be as high as 4.5 watts when the "ON" time does not exceed 30 seconds in any 2 minute interval.

APPLICATION

The Sylvania Type 6EV7 is a miniature high-mu twin triode having separate cathodes. It is designed for service as a relay-control tube in remote tuning units of television receivers.
